# GOALS OF REGULATION

---

- Supporting privatization/Attracting investment into the electric sector
- Protecting customers from monopoly abuse
- Implementing other national policies

# Elements of Utility Regulation

---

- Control of Entry (licenses)
- Price Regulation
- Obligation to Serve
- Service Quality (safety)

# Why regulate - U.S. Experience

---

- Four restructurings
  - State regulation created (1910-1920)
  - Federal regulation (1935)
  - Crises of 1970s
  - Competition and customer choice

# State-by-state regulation

---

- Response to problems of regulation by cities, including growing companies and corruption
- Choice between regulated private power and public power
- Supported by many utility companies hoping for independence and for expertise
- Included franchises, rates, eminent domain

## Federal regulation (1930-35)

---

- Response to inadequacies of state commissions, including size and corruption
  - Federal regulatory agency
  - Breakup of holding companies
- Federal public power to extend service and to challenge private companies
  - TVA and cooperatives

# Reaction to 1970s - I

---

- Caused by
  - Oil Prices
  - Inflation
  - Nuclear construction
  - Environmental concern
  - Consumer concern
  - Industrial customer concern
  - Limited regulatory competence

# Reaction to 1970s - II

---

## ➤ Results

- Stronger commissions
- Improved regulatory laws
  - Reviews of construction and purchases
  - Management audits
  - Energy efficiency
  - Integrated resource planning
- New interest in competition
  - Public Utility Regulatory Policy Act
  - Breakup of telephone monopoly (1984)

# U.S. Capacity by source

	1950	1970	1990
Capacity	68,900	341,100	735,100
Source			
Coal	47.1%		55.9%
Nuclear	00.0%	46.1%	20.6%
Oil	10.2%		04.2%
Gas	13.5%	01.4%	09.4%
Hydro	29.2%		10.0%
		12.0%	
		24.3%	
		16.2%	

# Restructuring today

---

- Driven by technology
  - Cheaper generating plants
  - Greater computer capability
- And by economics
  - Gas availability
  - Low oil prices
- And by developments elsewhere
  - Telephone and gas
  - Great Britain

# Results of current restructuring

---

- Full generation competition (federal then state)
  - New power plants chosen by market
- Open transmission access (federal)
- Substantial reduction in vertical integration (state and utility)
- Choice for most customers within three years (state)
- Lower costs
- Different products, more innovation
- Less regulation, more antimonopoly scrutiny (federal and state)

# Goals of regulation revisited

---

- Supporting privatization/Attracting investment
  - Costs must be fully recovered
    - By rates
    - or by subsidy
  - Bills must be paid, preferably in cash
  - Franchise agreements must be clear but flexible
  - Freedom from political influence
  - Transparency
  - Right of appeal

# Goals of regulation revisited

---

- Protection of customers
  - Avoid excess profits
  - Clear customer rights
    - Participation/legitimacy
  - Service standards
  - Connection and disconnection
  - Freedom from political and utility influence
  - Transparency
  - Right of appeal

# Goals of regulation revisited

---

- Implementing national policies
  - Service for all customers
  - National security
  - Environment
  - Economic development
  - Employment
- Consistent with independence?
- Laws, executive overrides, government planning, government participation

# A Question

---

- Why should you be learning cost-of-service regulation just as many countries are moving to deregulate parts of their power sectors and to apply performance based regulation?
